

#### TAXATION OF THE DIGITAL ECONOMY

Prof. P.M. John L. Hutagaol Director of International Taxation, DGT

#### **CURRICULUM VITAE**

Name : Prof. Dr. Poltak Maruli John Liberty

Hutagaol, M.Acc., M.Ec.(Hons.), S.E., Ak.,

C.A.

Position : Director of International Taxation

Place & Date of

Birth

· ·

: Jakarta, 27 November 1965

Office Address : Jalan Jenderal Gatot Subroto Kavling 40-

42, Jakarta

- I. Education
- ❖ Bachelor of Economics (University of Brawijaya, Malang) − 1988
- ❖ Master of Economics in Accountancy (University of Macquarie, Sydney) − 1994
- ❖ Master of Economics by Research (University of Macquarie, Sydney) 1995
- ❖ Doctor of Business Management (University of Padjadjaran, Bandung) − 2004
- Professor (ABFII Perbanas Institute, Jakarta) 2008
- II. Professional Organization
- ❖ Head of Tax Compartment Institute of Indonesia Chartered Accountants
- Head of Tax Department Indonesia Economist Association (Jakarta Chapter)
- Conceptor and initiator of the establishment of university tax centers in Indonesia

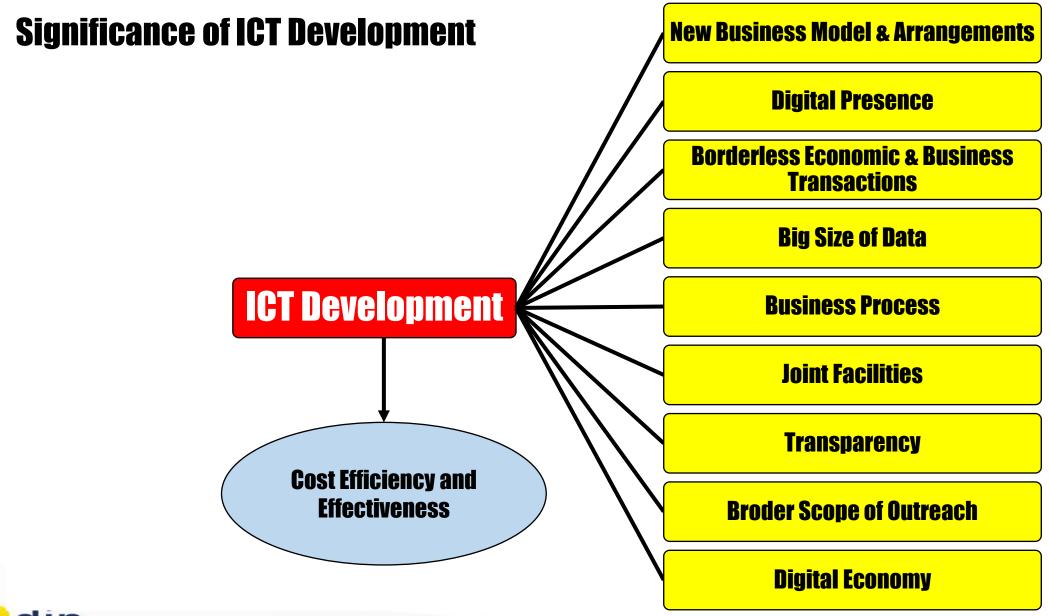

#### **OUTLINE**

- Recent Information and Communication Technology (ICT) Development
- Impact of ICT on Tax Administration and Policy
- Recent Updates on Taxation of the Digital Economy
- Taxation of the Digital Economy in Indonesia

## Recent ICT Development

#### **Problems:**

- 1. Big Data
- 2. Data Safeguard & Confidentiality
- 3. Technological Obsolence
- 4. Huge Initial Investment
- 5. National Interest & Resilience

#### **Powerful Tools:**

- 1. Storage
- 2. Organizing & Processing
- 3. Analysis
- 4. Predictive
- 5. Decision Support
- 6. Transmission
- 7. Connectivity
- 8. Monitor
- 9. Evaluation
- 10. Business intelligence
- 11. Descriptive and prescriptive

#### **Technology**

#### **General Impacts:**

- 1. Disruption way of doing Business
- 2. Changing the Mindset

#### **Special Impacts**:

- 1. E-Commerce
- 2. Cross-Border Transaction
- 3. Supply Chain Value of Business

#### Benefits:

- I. Cost effective & Efficient
- 2. More Convenient
- 3. More Flexible
- 4. Large Outreach
- 5. More Secure
- 6. More Simple
- 7. More Transparent
- 8. More Selective

#### **Industry Revolution**

#### **1.0**:

- began in the 18th century through the use of steam power and mechanisation of production
- the use of steam power for industrial purposes was the greatest breakthrough for increasing human productivity
- brought about further massive changes because humans and goods could move great distances in fewer hours

#### 2.0:

- began in the 19th century through the discovery of electricity and assembly line production
- Henry Ford (1863–1947) carried over the idea of mass production from a slaughterhouse in Chicago into automobile production
- now the vehicles were produced in partial steps on the conveyor belt—significantly faster and at lower cost

#### **3.0**:

- began in the '70s in the 20th century through partial automation using memory-programmable controls and computers
- using these technologies, we are now able to automate an entire production process—without human assistance
- known examples of this are robots that perform programmed sequences without human intervention

#### 4.0:

- we are currently implementing the Fourth Industrial Revolution.
- this is characterised by the application of information and communication technologies to industry
- production systems that already have computer technology are expanded by a network connection
- the networking of all systems leads to production network is nearly autonomous

**Value-Added Tax** 

Taxation
Policy on
Digital
Economy

**Equalization Levy** 

**Diverted Profit Tax** 

**Bit Tax or Bandwidth Tax** 

**Others** 

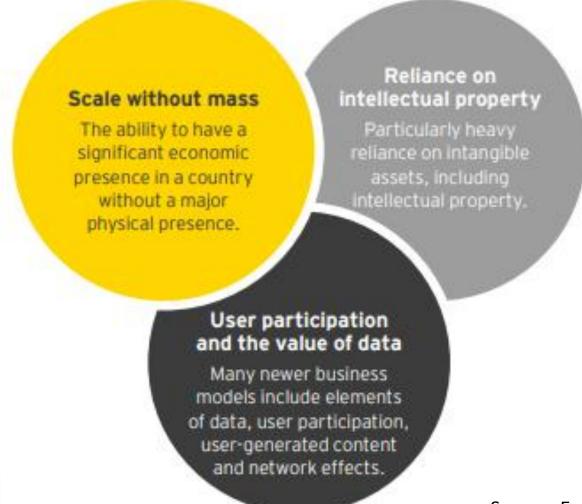

Aggresive Tax Planning

# Recent Updates on Taxation of the Digital Economy

#### **Three Characteristics of Highly Digitalised Business Models:**

Source: Ernst & Young (2018)

#### **TIMELINE**

# ISSUES ON DIGITAL ECONOMY TAXATION

#### 1. NEXUS

- Where tax should be paid?
- Significant digital presence, where value is created without any physical presence

#### 2. PROFIT ATTRIBUTION

- How much does the tax liable?
- Allocation of taxing rights

#### **TFDE MEETING PROPOSALS**

"The User Participation" Approach

"The Marketing Intangibles" Approach

VALUE CREATION ON DIGITAL ECONOMY

Global Antibase Erosion Proposal

Global Antibase Erosion Proposal

**UNRESOLVED BEPS ISSUES** 

#### THE UNITED KINDOM

#### "The User Participation" Approach

Policy Rationale

the **sustained engagement** and **active participation of user**s is a critical component of value creation for certain highly digitalised businesses

Social media platforms, search engines, and online marketplaces

#### Mechanics

An amount of profit be allocated to jurisdictions in which those businesses' active and participatory user bases are located

Calculated through a non-routine or **residual profit split** approach

# Other countries comments

**Conversion methodology** as another possible approach of measuring the attributable profit

Developing **clear boundaries (threshold)** that would exclude business that do not rely on user participation to make profit

#### THE UNITED STATES

"The Marketing Intangibles" Approach

#### Policy Rationale

Sees an intrinsic functional link between **marketing intangibles** and the **market jurisdiction** 

Three key fact patterns: does not have a taxable presence, or has a local presence but operates as an LRD, or consumer product business not traditionally thought of as a highly-digitalized business, operating either remotely or through an LRD structure

#### **Mechanics**

Modify current profit allocation and nexus rules to require that the non-routine or residual income of the MNE group **attributable to marketing intangibles and their attendant risks** be allocated to the market jurisdiction

Determine marketing intangibles whether allocated under the current rules of the TPG or to the market jurisdiction. Then calculated under a revised residual profit split analysis

# Other countries comments

**New approach** should take into account the conclusions of recent work on the contribution made by **DEMPE functions** (Actions 8-10)

The existing guidance on the remuneration of distribution activities, and **should remain consistent** with the existing tax framework including the arm's length principle

#### FRANCE AND GERMANY

#### **Global Anti-Base Erosion Proposal**

#### **Background**

The proposal recognises that there is **a risk** of un-coordinated unilateral action, in the absence of multilateral action

Therefore, a **multilateral framework** to achieve a balanced outcome which makes business location decisions less sensitive to tax considerations, limit compliance and administration costs and avoid double taxation

#### Two interrelated rules as solution

**Income inclusion rule** as a minimum tax by requiring a shareholder in a corporation to bring into account a proportionate share of the income of that corporation if that income was not subject to tax at a minimum rate (supplement the CFC rules)

Tax on base eroding payments which include an undertaxed payments rule that would deny a deduction for a payment to a related party if that payment was not subject to tax at a minimum rate and a subject to tax rule in tax treaties that would only grant certain treaty benefits if the item of income is sufficiently taxed in the other state. (Art 7, 9, 10, 11-13, and 21)

## Other countries comments

Need a **further work** to clarify the kinds of entities, arrangements and behaviours that are within the intended scope of the global anti-base erosion proposal

Considering **safe-harbours** and **thresholds** that would reduce complexity in the application of the rule

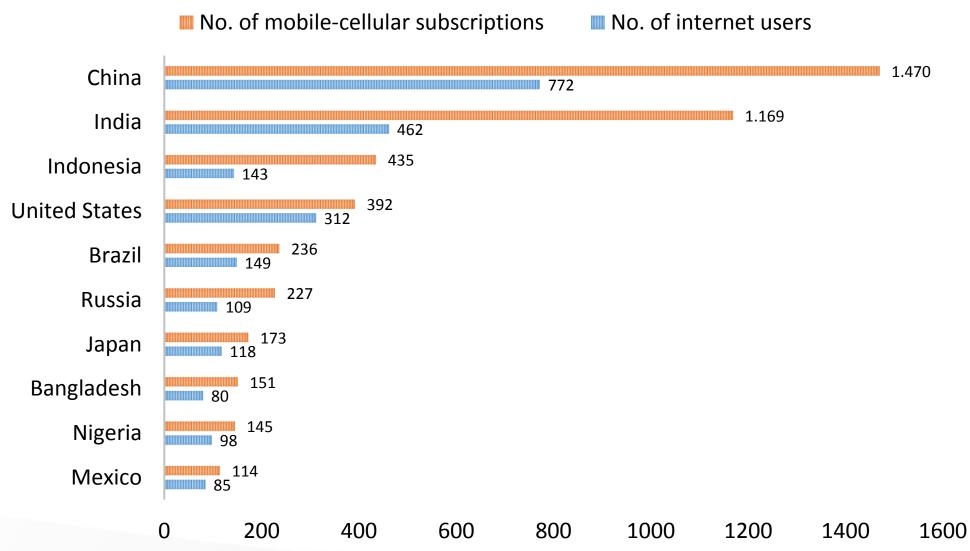

**Co-ordinating outcomes** and the possibility of incorporating dispute prevention and resolution components
